

Grand Piano & Piano

Plush creative comfort

As workplace behaviour shifts from the traditional concept of desk based working to a more transitory practice, we have recognised the need for furniture systems to evolve to facilitate this change. This furniture needs to excel in a number of key areas-comfort has to be at the highest level. Aesthetic excellence is of prime importance to create stimulating and inspiring environments. Versatility and the seamless integration of technological infrastructure to aid the use of mobile electronic devices and video screens are also absolute pre-requisites. Introducing Piano and Grand Piano from Summit.

A grand statement

Piano and the fully compatible and complimentary, high backed range, Grand Piano, together inspire the creation of versatile, modular seating layouts to support today's flexible working patterns.

With such a large selection of seating and table units it is only a room's walls that limit the possible configurations. The acoustic isolation afforded by Grand Piano's high back and arm extensions enables the creation of cossetting private work spaces or productive group meeting areas. The elbow height, work tables, placed between seating units allow for the comfortable use of mobile technology whilst integrated power modules will prolong the time available for working with these devices.

Where technology meets comfort

The desire to maintain connectivity at all times has inspired us to develop products and accessories designed to aid the use of portable technology. These include modular tables at arm rest height to allow for comfortable working, viewing or communicating via our mobile devices.

We offer seamlessly integrated power units for most of our modular tables and seats. These units have a 13 amp power socket and a fast charging facility via USB lead. When integrating VDUs with our Grand Piano range you can specify an alternative power module that includes a retractable HDMI lead for quick and easy connection to the screen.

The complete Grand Piano range

The versatile Grand Piano modular seating system is constructed around solid beech wood frames with sprung seat frames and thick seat foams for comfort and durability. It is totally compatible with, and linkable to the Piano Range units. Tables are available with Beech or Walnut laminate tops. Most of the seating units can be fitted with a power module that has a 13 amp socket and twin USB fast charging outputs. The high level screen units can also be specified with an alternative power module that adds a retractable HDMI cable and internal cable management for the seamless connection of a video screen.
